

What Comes First, Second, and Third Activity

During this activity we are going to learn how to put photos in order from oldest to newest. Take a look at each of the photos below, and decide which photo came first, second, and third based on the clues that are given. Then, connect them by drawing a line.

This photo came first, meaning it's the oldest. It is a drawing, because photography wasn't invented at this point in history. It shows a wagon pulled by horses, one of the earliest types of transportation. It also shows a log cabin.

This photo is second, meaning it came from a time period between the oldest and newest photos. It is in black and white, because color pictures were not invented yet. It shows a trolley, which was a popular type of transportation before cars.

This photo came last, meaning it's the newest. It is in color, because it came from a time after the invention of color photography. It shows cars, which are a popular type of transportation in 2021. It also shows street lights and traffic lights.
